About the Surgeon

Dr. Dany Hanna (he/him) is one of the few surgeons in the United States who performs gender affirming surgical procedures. He opened the groundbreaking Hanna Gender Center in Dallas, TX which is dedicated to operating exclusively on members of the transgender and non-binary (TGNB) community. He tailors male-to-female, female-to-male and non-binary procedures to align with your gender identity.

Dr Hanna attended medical school at the University of New England, a school that fostered a robust LGBTQ curriculum for medical students. Dr. Hanna served as class president for all four years of attendance and graduated in the top of his class.

After completing a residency in urology, Dr. Hanna was hand-picked to complete a year-long Gender Affirming Surgical fellowship with Kathy Rumer. During his training, he traveled to Europe to train with Miroslav Djordjevic, a leader in urogenital reconstructive surgery.
